

# BONE STRENGTH RESEARCH

CHILDREN 10-12 YEARS OLD NEEDED

## WHATS INVOLVED?

### **4** Annual measurement sessions. (1 visit per year for 4 years)

Sessions are ~2 hours and include:  
Body measurements, bone strength and  
muscle strength tests.

\*Children with type-1 diabetes will also have the  
choice to provide a blood sample for the  
assessment of bone building and growth molecules.

As a token of  
appreciation  
participants will receive  
an honorarium for each  
visit.

## BENEFITS

- ✓ Gain personal and general knowledge about the human body (e.g., bone) and muscle strength.
- ✓ Help us understand more about bone in children with type-1 diabetes.
- ✓ Learn about how science can be used to answer questions about health.
